Introduction

All storage systems within the Telstra Virtual Storage solution run ONTAP 9.1. Existing NetApp customers with a NetApp 'mysupport' account may wish to access the NetApp Interoperability Matrix (IMT) for an advanced view of all supported system configurations. The IMT can be accessed at <http://mysupport.netapp.com/matrix>

This guide contains a list of the most commonly connected systems (OS and Protocols) that are supported via Telstra Virtual Storage (powered by NetApp). If your desired configuration is not detailed within this guide it may still work, however it is encouraged to consider one of the below listed configurations, or raise a support case to review and assist with configuring your system.

This guide has been written with an assumption of knowledge of host activation processes. For assistance refer to host activation guides as below.
